

Summary

Part 1: The Product Block

The Product Block performs multiplication operations between input signals.

Part 2: The Gain Block

The Gain Block is a mathematical block that multiplies its input signal by a constant factor.

Part 3: The Sum Block

Sum Block performs addition or subtraction between input signals

Part 4: The Constant Block

The Constant block is a Constant value as the output signal.

Part 5: The Display Block

The Display Block is a visualization block that allows to view and display simulation results or signal values.
